

```
*SAS WRITE DATASETS
```

```
*PROC EXPORT;  
/*Syntax  
PROC EXPORT  
DATA = libref.SAS data-set (SAS data-set-options)  
OUTFILE = "filename"  
DBMS = identifier LABEL(REPLACE);
```

SAS data-set - is the data set name which is being exported.
filename - is the name of the file to which the data is written into.
identifier is used to mention the delimiter that will be written into the file.
LABEL option is used to mention the name of the variables written to the file.
*/

```
proc export data = sashelp.cars  
  outfile = '/home/u58831830/kkm_demo2/car_data.txt'  
  dbms = dlm;  
  delimiter = ' ';  
run;
```

```
*Writing a CSV file;  
proc export data = sashelp.cars  
  outfile = '/home/u58831830/kkm_demo2/car_data.csv'  
  dbms = csv;  
run;
```

```
*Writing a tab delimited file;  
proc export data = sashelp.cars  
  outfile = '/home/u58831830/kkm_demo2/car_tab.txt'  
  dbms = dlm;  
  delimiter = "tab";  
run;
```
