```sas
*SAS DATASETS
/*
It is created using the DATA step.SAS can read a variety of files as its data sources like CSV,
Excel, Access, SPSS and also raw data. It also has many in-built data sources available for use.
The Data Sets are called temporary Data Set if they are used by the SAS program and then
discarded after the session is run.
But if it is stored permanently for future use then it is called a
permanent Data set. All permanent Data Sets are stored under a specific library.
*/
*SAS Built-In Data Sets
/*
To explore these data sets go to Libraries -> My Libraries -> SASHELP.
*/
*Importing External Data Sets
/*
    1.We have to upload the source data files to SAS folder by
    using the upload option under the Server Files and Folders.
    2.Next we use the above file in a SAS program by importing it.
    To do this we use the option Tasks -> Utilities -> Import data
    3.We choose the "employee.txt" file stored in the local system and get the file imported
    4.We can view the imported data by running the default import code generated using the Run option
*/
```
